# NOW IS THE TIME TO BUY NURSERY STOCK

---

---

This year prices have been reduced again on numerous items where the supply of them would permit it. Some things are lower than they have been for years, and many the lowest they have ever been.

Another year these are reasons for expecting substantially higher prices regardless of what may happen meanwhile to our monetary system, or to prices of other things. The programs for reforestation and roadside improvement have not yet consumed any stock, but will begin to do so this spring and will likely require all the available stock in the sizes used of certain items of deciduous trees, windbreak evergreens, and ornamental shrubs. The extreme shortage of apple stocks this year greatly reduces the number of apple grafts which can be made and the future supply of apple trees. Many nurseries with their reduced income the past four or five years did not keep up a balanced planting, especially of the slow maturing kinds, and the shortage due to this is certain to be felt as soon as the buying power of farmers and home owners increases.

**ADDITIONS TO THESE PRICES.** Prices in this list may be increased sufficiently to cover any Federal or State Sales Tax which may be enacted after January 1st, 1934, or any increased cost of the stock or its distribution due to State or Federal legislation or regulation after that date.

**EQUIPMENT.** A clay block building 100x100 feet with a large double walled, insulated apartment provides room for storing and packing deciduous trees and shrubs with a minimum loss of vitality.

**LOCATION.** The nursery is on paved Highway No. 11, which connects with the Lincoln Highway seventeen miles South at Cedar Rapids, and with No. 20 twenty-five miles North at Independence. The office and storage house are just South of the C. R. I. & P. station grounds, and across the W. C. F. & N. and C. R. I. & P. tracks from the paving. The fruit and nut orchards are one and one-half miles South of the nursery on No. 11.

## EVERGREENS FOR WINDBREAKS AND HEDGES

All evergreens we offer are dug fresh as sent out. If the buyer comes to the Nursery after them, which is the best way to do, they can be lifted directly from the row to his truck or trailer and have a minimum of exposure. This is very important. If the roots of evergreens once become thoroughly dry in handling or planting they cannot be revived, as can other trees. Failure in transplanting them is largely due to allowing them to become dry while planting, to not packing good, mellow, moist soil, and that only, very firmly around the roots, or to not properly conserving moisture about them through the summer by frequent shallow cultivation or by mulching.

**SPACING.** For single row windbreaks plant Pines and Spruces 7 to 8 feet apart, and Arborvitae 4 to 6; for double rows of Pines or Spruces 10 to 12 feet. For low hedges plant 18 to 24 inches apart, depending on the size of the plants.

**SOILS.** Plant Pines on dry or well drained soil. The Bull Pine will do well on very gravelly soil. In places where it is quite wet at times, Spruce will be better, and in very wet places, Arborvitae is the best.

**PESTS.** Red Spider or Mite causes much damage during a drouth in the growing season. A rusty appearance is likely to be due to it. Water applied under a high pressure to the tops every few days is an effective remedy. Pine Needle Scale is found almost everywhere and sometimes becomes a serious pest. White spots on the leaves of pine or spruce are likely due to it. Both this and Red Spider can be controlled by a single thorough spraying with Lime Sulphur such as orchardists use, in the regular dormant strength (1 to 8 of water) applied warm days in spring before the new growth starts. Soluble oil sprays also are effective, but must be used with much caution.

**PRICES** in this section are for unsheared trees and do not include Ball and Burlap; if wanted that way, the expense of making it and the cost of handling the additional weight must be added. Each X represents one transplanting.

## SPECIMEN EVERGREENS FOR LANDSCAPE PLANTING

The following are for well developed trees, securely burlapped and bound. Such trees are much heavier to handle, but easier to plant and more certain to grow. In planting, do not remove the burlap. After the tree is in place, and hole partly filled to hold it, cut the burlap loose around the top and pour in plenty of water. Large trees over 9 feet should be ordered before hard freezing so they can be mulched for winter digging, and the ball of dirt frozen solidly before moving. Imperfect specimens (defective on the side or at the bottom) can often be used as effectively in groups and will be priced according to quality. Each X represents one transplanting.

A spreading, irregular, bushy form.	2-3 ft. XX	3.00

## DECIDUOUS TREES AND SHRUBS

Trees and Shrubs are included under one heading, as it is difficult to distinguish between them, and there is no need for trying to do so. Botanical names are given preference, except where the common names are well established and better known. Larger sizes than are quoted can be furnished of many trees and shrubs, and correspondence concerning them is invited, also larger quantities will be gladly quoted. The figures after the names indicate the size attained at maturity under average conditions, and will vary considerably in different places.

Special requirements such as acid or limestone soil, moist or dry soil, shade or full exposure, winter protection, etc., are noted, if important.

	Size	Each	Per 10
<b>ACANTHOPANAX pentaphyllum, 5 to 7 ft.</b> .....	2 to 3 ft.	\$0.35	\$3.00

## ROSES

All plants offered are two-year field-grown bushes. Cut back the top so only two or three of the stronger canes are left six inches long, and plant a little deeper than they grew.

**QUANTITY PRICES.** Almost as much work and expense is used in filling and packing an order for one bush as several, so we can give cheaper rates on larger quantities.

On orders for 5 to 12 plants deduct 5c per plant.

On orders for 12 or more plants deduct 10c per plant.

### CLIMBING ROSES

## PEONIES

Peonies may be planted in any good garden soil, not too shaded, and the buds should not be covered more than two inches. Bone meal may be used about them and some complete commercial fertilizer applied with caution.

A stock of the more expensive varieties is not kept in storage for late spring planting, so any orders for them which come too late for spring digging will be held till September, which is the best time for planting Peonies.

The figures after the price of each variety is its rating by the American Peony Society, and is made on a basis of 10.0 being perfect. The prices are for standard divisions of 3-5 eyes or buds. Other sizes furnished on this basis.

## IRIS

Bearded Iris may be planted any time, but preferably not at blooming time, and should be planted shallow, on well drained limestone soil. Fibrous rooted kinds like moisture and more acid soil, and are better moved in spring or September. A group of one kind or color is better than single plants of many colors.

**QUANTITY RATES.** Applicable to any variety; not to assortments.

10c kinds, 20c for 3, \$0.45 for 10 and \$2.50 for 100 fans

15c kinds, 30c for 3, .75 for 10 and 4.00 for 100 fans

20c kinds, 40c for 3, .85 for 10 and 5.00 for 100 fans

25c kinds, 50c for 3, 1.00 for 10 and 6.00 for 100 fans

## OTHER HARDY PERENNIALS AND ROCK GARDEN PLANTS

The measure given is the average height, and the dates, the blooming period. Most perennials can be moved well either fall or spring, and many of them through the summer. Plants one foot or under are usually suitable for some place in the rock garden unless too aggressive, by underground spreading, as in the case of *Achillea ptarmica*, *Campanula rapunculoides*, etc. Special cultural requirements are briefly noted.

\*Prices, unless otherwise given: Field-grown plants 20c each, \$1.50 per ten, \$12.00 per 100—3 or more of one kind at ten rates, and 25 or more at hundred rates. For plants selected in the growing season and dug with a ball of earth, add 5c to each price.

**ACHILLEA, Milfoil, Yarrow.** Thrive in any soil in sun.

— *fillipendulina*, **Fern-leaved**, 3 to 4 ft. Broad corymbs of bright yellow, June-July.

— *millefolium roseum*, 1 to 2 ft. Rosy pink. Finely cut foliage, June-September.

— *ptarmica*, **Mt. Blanc**, 1 to 2 ft. Pure white much superior to the Pearl. June-September. Splendid for cutting.

— *tomentosa*, **Wooly Yarrow**, 6 in. Sulphur yellow. June. Wooly foliage.

**ACTEA spicata rubra, Red Baneberry, 30c:** 18 in. Needs shade and humus. Spikes of white flowers in May. Shining red berries in August.

**AETHEONEMA schistosum, 30c:** 9 in. A bushy, shrubby plant with blue-green foliage and rose pink flowers. May. Has very deep tap root. For sandy soil.

**AGROSTEMMA coronaria, Rose Champion, Mullein Pink, 2 ft.** Sandy soil. Tufts of silvery, wooly foliage and single velvety red flowers. June-July.

**AJUGA reptans, Bugle, 6 in.** Very compact, blue, May and June. Good ground cover.

**ALLIUM odorum, Wild Garlic, 1 ft.** Heads of pink flowers. June.

— **Ruby King, 1 ft.** Erect large heads of deep rose flowers. June.

— **Chives, 8 in.** Purplish heads in May. Edible.

**ALYSSUM argenteum, 1 ft.** Silvery foliage, clusters of yellow flowers most of summer.

## APPLES

Apple trees should be planted 30 to 40 feet apart. Cherry trees, or other small or short-lived trees may be planted between till the apple trees need the space. They respond to good cultivation and care as freely as does corn or any other crop. Our trees are graded according to the standard rules of grading. The 5 to 6 foot size caliper  $\frac{1}{8}$  in. and up; the other sizes  $\frac{5}{8}$  to  $\frac{1}{16}$  in and  $\frac{1}{2}$  to  $\frac{5}{8}$  in., respectively. Many varieties will run considerably taller than rated, and a few dwarf growing kinds are shorter.

The following list is arranged approximately in the order of ripening:

### EARLY VARIETIES

Liveland (Lowland Raspberry)	Duchess (Oldenburg)
Yellow Transparent	Benoni
Red Astrachan	Niehner

Liveland is the best real early apple; it is beautifully colored, has the highest quality, and keeps remarkably for an early apple.

Benoni and Niehner have high quality and ripen just after Duchess.

### FALL VARIETIES

Anoka	Snow (Fameuse)
Ramsdell Sweet	Longfield
Wealthy	Lords L.

### WINTER VARIETIES

Adel	Turley	N. W. Greening
McIntosh	Hawkeye (Greening)	Stayman (Winesap)
Delicious	Secor	Allen's Choice
Sharon	Cortland	Salome
Sheriff	Rome Beauty	Mammoth Black Twig
Jonathan	Roman Stem	York Imperial
Grimes (Golden)	Windsor	Gano
Isherwood	Iowa Blush	Willow Twig
Red Flesh	Tolman Sweet	Nelson Sweet
Banana (Winter)	Northern Spy	Malinda
Golden Russet		Rall's (Janet or Geniton)

Adel, Sharon, Secor, and Hawkeye are new varieties from Ames and all splendid varieties. Sharon, especially, is a strong grower and heavy bearer, has good size, color, and excellent quality.

### CRAB APPLES

Whitney	Virginia	Wynema
---------	----------	--------

Wynema is a hybrid Wild Crab, growing 8 to 9 ft., and bearing immense crops of fruit about the size and color of Whitney, but otherwise like the small, green, wild crabs. It is unexcelled for jelly and will keep a year.

PRICES of all Apple and Crab Apple:	Each	Per 10	Per 100
5 to 6 feet .....	\$0.50	\$4.50	\$40.00
4 to 5 feet .....	.40	3.50	30.00
3 to 4 feet .....	.35	3.00	25.00

## PEACHES

Peaches in central Iowa should be planted where they will have as much protection as possible.

PRICES—Budded varieties.	Size	Each	Per 10
Champion, Bokara, and Elberta .....	4 to 5 ft.	\$0.50	\$4.50

## PEARS

Pears are best on gravelly clay upland soils. On rich loams they blight seriously. More than one variety should be planted to insure pollination. The standard, or large growing trees, should be spaced 18 to 20 ft. apart; the Dwarfs, 10 ft.

The following list is arranged in approximately their order of ripening:

Wilder	Seckel	Douglass
Clapp's Favorite	Smyth	Kieffer
Bartlett	Flemish Beauty	Patten
Lincoln	Bosc	Anjou
	Phelps	

PRICES of all standard Pears:	Each	Per 10
5 to 6 feet .....	\$0.50	\$4.00
4 to 5 feet .....	.40	3.00
3 to 4 feet .....	.30	2.50

**DWARF PEARS** are grafted on Quince roots, which dwarf and bring them into bearing earlier. They are most useful where room is limited. Duchess does particularly well as a dwarf.

	Duchess	Seckel	
	Bartlett	Clapp's Favorite	
5/8 in. and up, mostly 4 ft. and up .....			\$0.50      \$4.50

## CHERRIES

(In order of ripening)

Early Richmond	Ostheim	Yellow Glass
Montmorency		English Morello

Early Richmond and Montmorency are the most dependable and the most planted. Yellow Glass is a true sweet cherry and is more tender than the others. English Morello is very late and very dark in color.

These are standard grades.

		Each	Per 10
The caliper governs. Bushy trees	1 1/8 in. mostly 5 ft. & up.	\$0.50	\$4.00
often are shorter than rated.	9/16—1 1/16 in. mostly 4 ft. & up.	.40	3.00

## PLUMS

Beatty	Loring Prize	Surprise
Damson	Oka	Terry
Desoto	Reine Claude	Toka
Elliott	Richland	Tonka
German Prune	Superior	Underwood
Lombard		Wachampa

Terry, Beatty, and Desoto are all pure American varieties of splendid quality for all purposes, and are very dependable for the far North.

Elliott, Tonka, Loring Prize, Underwood, and Superior are splendid large new hybrid varieties with very small seeds and high quality, but do not pollinate one another. To secure pollination plant Surprise, Desoto and Toka among them in the proportion of one or more of these to nine of the hybrids.

Oka and Wachampa are hybrids of the Western Sand Cherry produced by Professor Hansen, and make very crooked trees. The fruit is of medium size, has purplish flesh, very small pits, and is very fine for canning. Oka is a very dwarf tree or bush.

German Prune, Lombard, Damson, and Richland are European or Blue Plums, and splendid for canning.

PRICES of Plum Trees:	Each	Per 10
5 to 6 feet .....	\$0.50	\$4.50
4 to 5 feet .....	.40	3.50

## GRAPES

(In order of ripening)

Alpha, black	Wyoming, red	Lucile, red
Beta, black	Worden, black	Niagara, white
Moore Early, black	Caco, red	Concord, black
Diamond (Moore's) white	Delaware, red	Agawan, red

Beta and Alpha are small grapes, excellent for juice or jelly. The vines are very hardy and compact, fine for arbors.

## RASPBERRIES

The purple and black varieties grow from tips and do not spread much; red varieties sucker freely.

Raspberries are usually planted in hedge rows about 2 ft. apart in the row.

Cumberland is the most planted black variety.

Cardinal is the best of the purple varieties, fine for home use.

Chief and Latham are the leading red varieties. Latham is larger and Chief the more productive and a little earlier.

PRICES—	Per 10	Per 100	Per 1000
Latham and Chief .....	\$0.50	\$3.50	\$30.00
Other varieties .....	.40	3.00	25.00

## BLACKBERRIES AND DEWBERRIES

We have found the Snyder Blackberry the most dependable of many kinds tried and confine our growing to it. All the plants offered are root cutting plants; none are suckers from an old run-out patch.

PRICES—Snyder Blackberry:	Per 10	Per 100
Heavy grade .....	\$0.60	\$5.00
Medium grade .....	.45	3.50
Lucretia Dewberry, tip plants .....	.40	3.00

## STRAWBERRIES

The Blakemore Strawberry introduced by the U. S. Department of Agriculture is gaining in favor. The fruit has good size, color, and firmness; excellent quality for canning, and is easy to pick and hull. The plants are extra vigorous and productive, and do best on heavier soils.

The Dunlap is the old standby; it is good for all purposes and succeeds under most conditions.

The Progressive is our favorite Fall Bearing variety. It is unexcelled in quality, very productive and has good size, if growing conditions are good.

Plant new beds each year in rows 4 feet apart and 18 inches in the row.

PRICES—	Per 10	Per 1000
Dunlap and Blakemore .....	\$1.00	\$ 8.00
Progressive, fall bearing .....	2.00	15.00

## ASPARAGUS

This is one of the first spring vegetables ready to use, and one of the most wholesome of them. Plant it along the fence and plant it by the hundred rather than by the dozen.

Martha Washington (Rust Proof).

Two-year plants, heavy .....	\$0.40	\$3.50	\$20.00
One-year plants .....	.30	2.00	10.00

## RHUBARB

Rhubarb, like Asparagus, should be planted in rich soil where it need not be disturbed, and will produce a great lot of wholesome food with a minimum amount of work. Heavy clumps of it may be forced in the furnace room in winter if they are dug in the fall and allowed to freeze hard before taking in.

## NUT TREES

**TRANSPLANTING.** Nut trees are hand-dug and usually have long, deep roots. They are not difficult to transplant if the top is cut back, and roots are protected from unnecessary exposure, the holes are dug deep enough to avoid crowding the roots, and mellow, moist top soil is tamped very firmly about them. Painting the cut ends and entire top with a very thin coat of melted paraffine at the time of planting will prevent desiccation and help greatly should the tree be slow in starting, as will also a mulching or dust mulch about the tree to conserve soil moisture.

**CIONS.** Very often young seedling trees are available which can be top-grafted to the better varieties, and bearing trees produced very quickly. For such work cions of many varieties not listed can be supplied, and a list of them will be sent upon application.

**BLACK WALNUTS.** The steadily decreasing number of walnut trees and increasing use of walnut for interior finishing and furniture assures a good future market for walnut logs. Many a tree will bring enough to buy an acre of ground about it, or even several acres, for they may be grown on bottom land which overflows. For the production of timber alone, seedling trees could be used, but would be less uniform in growth than grafted trees, and for the production of nuts, all would be inferior and some have no value at all. The grafted kinds are well worth planting

for the nuts alone. The use of walnut meats is rapidly increasing in ice cream, candy, and cakes, for no other nut, except the hickory, retains its flavor so well after heating. In the landscape the grafted varieties are superior, having more leaflets and they are a darker, glossier green than those of the seedling trees.

**Thomas** is the best known variety and succeeds over a wide territory. The tree is hardy, very vigorous, productive, and a very young bearer, switches one year old often bearing the following season. The nuts are large and fairly thin shelled. Kernels come out easily and a bushel yields ten pounds or more meats of fine quality.

**Ohio** is a close rival of the Thomas, and by some is considered rather superior to it in certain respects.

**Stabler** is a native of Maryland, and not as hardy as Thomas or Ohio. The tree is bushy and comparatively slow growing. The nut is of fair size, very thin shelled, and often not divided, so the meats can be extracted in one piece.

**Rowher** scored nine points more than Thomas in the 1926 contest of the Northern Nut Growers' Association. Originating in Northern Iowa, it certainly is hardier.

**Bontz** is a variety from Illinois with a good record for productiveness. The nuts score equal to Thomas and yield a higher percentage of quarters.

Besides the kinds listed above, a few trees are available of Deming Purple, Stambaugh, Creitz, Galloway, and others more recently discovered, and will be quoted on application.

PRICES all varieties—	6-8 ft.	5-6 ft.	4-5 ft.	3-4 ft.	2-3 ft.
	\$2.50	\$2.00	\$1.50	\$1.25	\$1.00

**CHESTNUTS** are the most dependable bearers of the food-producing nut trees. They bloom very late, so escape the frost injury which occasionally destroys the crop on other nut and fruit trees.

The grafted varieties are much more fruitful than seedling trees, but are usually self-sterile and several kinds should be grouped together to insure fertilization.

All the varieties offered are considerably larger than the common American Chestnut and are of splendid quality. They differ mostly in appearance or a little in season of ripening.

**Morris No. 2** is a Chinquapin Hybrid. Very small trees bear many small burrs with nuts resembling chinquapins in shape and quality, but larger.

**Other Varieties.** A few trees are available of Progress, Gibbons, Rochester, Fuller, Lovette, and others.

**HICKORIES, HICCANS, and PECANS.** It takes so long to get stocks large enough to graft, and they are difficult enough to propagate that these trees will be scarce for a long time. A very few trees of several varieties not listed are available in small numbers. These include Iowa (a large Shellbark), the hardy Northern Pecans, and various hickories.

**Beaver** and **Fairbanks** are rapid growing very productive hybrids of the Bitternut and Shagbark. The nuts are large, attractive, thin shelled and good.

**Stratford** is one of the earliest and heaviest bearing Shagbarks. The smooth white nuts crack very easily and have splendid quality.

**Vest** and **Hand** are very thin, ridged shelled, Shagbarks of very fine quality.

**Hagen** is a rapid growing pure Shagbark. The meats easily crack out in halves and are unexcelled in richness and flavor.

**Des Moines** and **Burlington** are rapid growing Hiccans, or hybrids of the Hickory and Pecan. The large brown nuts are sharp pointed, a little thicker shelled than Pecans, but have no bitter inner shell. The meats partake of the Hickory flavor

and are better than any pure Pecan. They should not be planted North of the middle of Iowa. Farther North plant the Shagbarks and their Hybrids. Pecans require a long season and can not be expected to mature North of the South one-third of Iowa.

**THE WINKLER HAZLENUT** is the best and largest of many kinds we have tried. The nuts are produced freely, are larger than many European Filberts and have the choice quality of the small wild hazlenut. They are large, or very large, sometimes over one inch long. Often the kernels almost burst the shells open and they can be easily pried apart with a light knife or one's thumb nail. The bush is shapely and grows to about six feet, making a desirable ornamental shrub. The foliage is good, and colors beautifully in autumn with crimson, gold, and bronze.

Transplants .....	18 to 24 in.	\$0.50 each	\$4.00 per 10
Transplants .....	24 to 30 in.	.60 each	5.00 per 10
Transplants .....	30 to 36 in.	.80 each	7.00 per 10

**HARDIN HAZLENUT.** A taller growing bush than Winkler, bearing large nuts of splendid quality. Yellow and orange in autumn. Only a few 30 in. bushes at \$1.00 each.

**The Northern Nut Growers' Association** is an organization for collecting and disseminating information of value to nut growers in the Northern states. Annual meetings are held and interesting and valuable reports published. Further information may be had from the Secretary, Mr. George L. Slate, State Experiment Station, Geneva, New York.

**NUT GROWING, by R. T. Morris.** This standard book is now brought completely up-to-date in its new revised edition. Now includes instructions for the new Neilson method of wax protection and many other new features. Tells how to grow all kinds of edible nut trees. Includes many illustrations and clear directions for simple grafting methods. 33 illus., 219 pages. **Postpaid \$2.50**

**AMERICAN ALPINES IN THE GARDEN. By Anderson McCully.** Hundreds of fine plants from our Pacific Northwest are fast coming into favor with garden makers everywhere. This new book describes and tells how to grow over 500 different kinds and gives full information on making a rock garden and moraine, pools, growing from seed, purchasing, and transplanting. 19 illustrations, 262 pages. **Postpaid \$2.50**

**PERENNIAL GARDENS. By H. Stuart Ortloff.** More than a list of plants with directions for growing, this is a creative handbook of their uses. It gives you, in effect, the trained help of a landscape architect. Plans and planting lists include almost every conceivable kind of small garden, each one of which was actually planted and brought into flower before being included in the book. The summary of color principles is, we believe, the most usable ever offered. There are clear directions for preparing and fertilizing the soil, cultivating, watering, pest control, transplanting, propagation, and winter protection. Kinds and varieties of perennials for many different purposes are classified, with directions for selecting the desirable ones for any purpose. 92 pages, 18 illustrations. **Postpaid \$1.25**

**PRICES** given are for the stock, properly packed and delivered at the Nursery, the stations here, or at nearby towns, in case we are making a general delivery there. Small plants will be sent postpaid by parcel post within the second zone, or the third zone if not too heavy. It is now possible to send a very few fruit trees 5 to 6 ft. by parcel post, but it is not practical if several are wanted.

**CONDITIONS.** All orders are accepted on condition that they shall be void should any injury befall the stock from hail, frost, fire, or other causes beyond our control. Deliveries are subject to delay by bad weather, bad roads, strikes, accidents, embargoes, and causes beyond our control.

**TERMS OF PAYMENT** are cash on or before the delivery of the stock, unless previously otherwise agreed upon. Remittances may be by check or any convenient form, payable to Snyder Brothers, Inc.

**CLAIMS** for errors or shortage will be considered if made immediately upon the receipt of the stock.

**GUARANTEE OF GENUINENESS.** While we exercise the utmost diligence to have all of our varieties true to name, and hold ourselves in readiness on proper proof to replace all trees, etc., that prove untrue to name, we do not give any warranty, expressed or implied, and in case of any error on our part, it is mutually agreed between the purchaser and ourselves that we shall not at any time be held responsible for any sum greater than amount originally paid for the said trees.

**SHIPPING FACILITIES.** Our facilities for shipping by either freight or express are excellent, as we are located adjacent the station grounds of both the C. R. I. & P. and W. C. F. & N. Railways. Express rates are 25% lower than the spring of 1933, so small orders are best sent this way.

**TRUCK SERVICE** can be arranged here at rates comparable to railroad freight rates, for those at a distance who have a truck load of stock and prefer to have it come that way. It is better for the stock to be sent by truck, for then it does not have to be crowded into crates or boxes and is not subject to delays and transfers en route.
